Transformation Decision Framework

FROM POSSIBILITY TO EVIDENCE-BASED ACTION

Assess the situation. Test the evidence. Choose the right path. Create measurable value.

1 APPLY THE THREE DS

Start with the business problem: what is happening, what evidence supports it, and why action matters.

DATA / FACTS	DEMONSTRATE	DEMAND
What do we know today? What evidence supports our understanding of the current state?	Can we demonstrate the issue, opportunity, or performance gap with evidence?	What need, expectation, risk, or strategic priority creates a reason to act?

For each dimension: distinguish what we **have now** from what we **need to get**. Identify gaps rather than filling them with assumptions.

2 EVALUATE THREATS AND OPPORTUNITIES

Use the CKG Threat/Opportunity Matrix to consider consequences of action and inaction, including short- and long-term impacts.

	DON'T CHANGE (Maintain current state)	DO CHANGE (Pursue transformation)
THREAT What could go wrong?	**Threat — Don't Change** What happens if the current state continues? Consider risks and negative consequences.	**Threat — Do Change** What risks or unintended consequences could change introduce?
OPPORTUNITY What could go right?	**Opportunity — Don't Change** What value, learning, or benefit might be lost by maintaining the current state?	**Opportunity — Do Change** What benefit could action create—such as improved performance, experience, capacity, or strategic advantage?

3 MAKE EVIDENCE VISIBLE

A high or low rating describes the assessment; it does not automatically indicate strong or weak evidence.

RECORD EVIDENCE	SEPARATE FACTS FROM ASSUMPTIONS	IDENTIFY WHAT IS MISSING
Document sources, analysis, and key findings.	Note what is known, inferred, and unverified.	Specify evidence needed to support or change the decision.

4 SELECT THE APPROPRIATE PATH

Choose the intervention that fits the opportunity, evidence, business context, and desired outcomes.

REDESIGN	CONTINUOUS IMPROVEMENT	AUTOMATION	ARTIFICIAL INTELLIGENCE
The underlying workflow, roles, handoffs, or operating model need to change.	The process is fundamentally sound but has waste, variation, defects, delays, or rework.	Repeatable steps or handoffs can be streamlined with clear rules, controls, and exception handling.	A specific AI capability offers meaningful advantage over simpler alternatives, with value, feasibility, risk, governance, and human oversight addressed.

5 MAKE AN EVIDENCE-BASED DECISION

Record the decision, rationale, accountable owner, conditions, and next action.

PROCEED	PROCEED WITH CONDITIONS	INVESTIGATE FURTHER	DEFER	STOP
Evidence supports moving forward.	Move forward with defined safeguards or prerequisites.	Obtain evidence needed to resolve material uncertainty.	Wait for better evidence or changed conditions.	Do not proceed; the case does not justify moving forward.

TIME SAVED ≠ VALUE CREATED

Measure the outcome that matters—and the effort required to sustain the improvement.
