CRITICAL KNOWLEDGE GROUP

SEE THE POSSIBILITY.
BUILD THE CAPABILITY.
MULTIPLY THE IMPACT.

Transformation Decision Framework™

FROM POSSIBILITY TO EVIDENCE-BASED ACTION

Assess the situation. Test the evidence. Choose the right path. Create measurable value.

1 | APPLY THE THREE Ds

Start with the business problem. Establish what is happening today, what evidence supports the need for change, and what outcome must improve.

Data / Facts
What do we know today?
What evidence supports our understanding of the current state?

Demonstrate
Can we demonstrate the issue, opportunity, or performance gap with evidence?

Demand
What business need, customer expectation, risk, or strategic priority creates a reason to act?

For each dimension, distinguish what we **have now** from what we **need to get**. Identify missing evidence rather than filling gaps with assumptions.

2 | EVALUATE THREATS AND OPPORTUNITIES

Use the CKG Threat/Opportunity Matrix to consider the consequences of action and inaction, including both short- and long-term impacts.

	DON'T CHANGE (Maintain Current State)	DO CHANGE (Pursue Transformation)
THREAT (What could go wrong?)	**Threat — Don't Change** What happens if the current state continues? Consider risks and negative consequences.	**Threat — Do Change** What risks or unintended consequences could change introduce?
OPPORTUNITY (What could go right?)	**Opportunity — Don't Change** What value, learning, or benefit might be lost by maintaining the current state?	**Opportunity — Do Change** What benefit could action create? Consider improved performance, experience, capacity, or strategic advantage.

CKG Threat / Opportunity Matrix

3 | MAKE EVIDENCE VISIBLE

Document the evidence behind the decision. A high or low rating describes the assessment; it does not automatically indicate strong or weak evidence.

Record the evidence behind each rating.
Include data sources, analysis and key findings.

Separate facts from assumptions.
Document what is known, what is inferred, and what still needs to be verified.

Identify what is missing.
Specify the additional evidence needed to support or change the decision.

4 | SELECT THE APPROPRIATE PATH

Choose the intervention that best fits the opportunity based on the evidence, business context, and desired outcomes.

REDESIGN
Choose when the underlying workflow, roles, handoffs, or operating model need to change.

- Reimagine end-to-end process
- Change structure or roles
- Address fundamental issues

CONTINUOUS IMPROVEMENT
Choose when the process is fundamentally sound but has waste, variation, defects, delays, or rework to address.

- Eliminate waste
- Reduce variation
- Improve quality and speed

AUTOMATION
Choose when repeatable steps or handoffs can be streamlined with clear rules, controls, and exception handling.

- Automate structured work
- Increase speed and accuracy
- Free capacity for higher value

ARTIFICIAL INTELLIGENCE
Choose when a specific AI capability offers a meaningful advantage over simpler alternatives—and value, feasibility, risks, governance, and human oversight can be addressed.

- Augment or enhance decisions
- Handle unstructured data
- Create new capabilities or insights

5 | MAKE AN EVIDENCE-BASED DECISION

Document the decision, rationale, accountable owner, outstanding conditions, and next action. Preserve the distinction between deferring and stopping.

Proceed
Evidence supports moving forward.

Proceed with conditions
Move forward with defined safeguards or prerequisites.

Investigate further
Obtain evidence needed to resolve material uncertainty.

Defer
Defer until conditions change or additional evidence is available.

Stop
Do not proceed. The case does not justify moving forward.
